

Selenium

Albert Garcia

Library Room Reserver

- I will be showing how to automatically reserve study rooms in the library with selenium.

Setting Selenium for Python

- First you need to make sure you have the Selenium package installed.
 - `pip install selenium`
- Next you will need to download the corresponding webdriver for your browser of choice from <https://www.seleniumhq.org/download/>.
 - Under third party browsers you can select and download the corresponding version that matches your browser version.
 - You can then place this file in your project's directory as we will be referencing it later.
