Web Scraping

Instagram

By: Jacquelene Pham

OBJECTIVE:

- Given a hashtag search, we will be scraping images, like/comment count, and other data from the top posts
  - Scrape all hashtags found from each post to observe what is trending and what people like to post about under that original search

RESOURCES:

- **Request Python Library**
  - Make a request to Instagram
  - Access data content - *get()*
- **Pandas**
  - Create data frames to store extracted data
- **Python Imaging Library & MatPlotLib**
  - To use for Data Vis
